Spicy Avocado

Meeting Agenda 12-04-19

Progress Report:

- achieved & missed milestones from your project plan;
    - Completed all essential tasks as part of POC & MVP
        - Everything we had originally planned to do
        - Some of user feedback was incorporated in MVP, but we moved some for the final deliverable
    - Final stretch
        - Focus on UI upgrade
        - Multiple Stops
        - User-related stats
            - How much the user has travelled
            - Where the user loves to go
        - Trip Information
            - elevation
        - Map Information
            - Showing dock information on map
        - Sending Trip to email
        - Autocomplete on form
- any difficulties that you encountered;
    - Placing the heart on top of the map as an overlay was difficult, and we tried to use Vuetify.js to do this, but it didn't play well with our current code. Eventually we got it to work through some method.
    - Trip communication between client and server for saving trips and displaying saved trips. Originally, this would be the same object that is sent when drawing the trip on the map, but this would be too much information, as only the non-dock stops are necessary, since docks are variable and might change
- any changes made to your design or project plan.
    - We added some 'reach goals' to our MVP plan, which included user feedback from POC presentations. However, we only got to two of them, as we expected, so we moved the others for the final, where we hope to address them
    - Still looking into having Blue Bike docks be marked on map as users log in, and how we can create the UI for this
    - Considering how to move on with the plan to add multiple-stop functionality, so users can list out stops they want to reach.

Points to discuss:

- Demo: presentation of MVP implementation
- Feedback from Demo
    - Anything to change/add/remove
    - What can we improve on
    - For directions: should we still have sections for each route?
- Progress Report

- - ○ Does Demo accurately show our MVP goals from project plan?
    - ○ Feedback moved to final because not in original MVP plan
    - ○ Difficulties for trip communication
    - ○ What to add to final goals after the MVP demo?
- Goals and tasks necessary for Final
  - ○ Go over project plan
  - ○ What changes should we make (if any?)
  - ○ Multiple stops specifics
    - How should this work?
    - Any limit to stops
    - How would this look in UI?
      - How would directions display be changed?
      - How would communication be altered?
- Design
  - ○ Go over current design
  - ○ Go over feedback received from POC and MVP, which ones we want
  - ○ What changes should we make to design (if any?)
